THE WANT AD SEESES MORE PEOPLE IN ONE DAY THAN YOU CAN SEE IN A MONTH**MINING ACTIVITIES
IN THE SOUTHWEST**

Items of Interest in the Mining Camps Throughout Arizona and New Mexico Development and Production.

crushing over 60 tons of ore per day. The ore is being hoisted from the first, second and third levels, and the fourth is being unstacked. The new compressor, operated by the Es La Verne oil engine, has been installed, and the management reports that power cost for the same is reduced to one-fourth of what it formerly was with the use of the gasoline motor.

Owing to shortage of water at the power plant of the Treasure Mining and Reduction company the mill is dropping but 10 stamps during part of the day. During the remainder of the day the mill is run at full capacity.

The Oaks company has erected a store-room at the immer site. The portal is being timbered.

The second June clean-up of the Ernestine Mining company yielded 6,475 ounces of gold and silver bullion.

Tucson. The American Exploration and Mining company has made a wide search for the 50-foot at a depth of 32 feet, where some high-grade sulphides were encountered, specimens of which have been made to Clinton and Douglas. The property has been enlarged with a modern operating plant consisting of a 100-ton galloway frame, a 30-ton car, ore bin capable of holding two tons with 10 tons of ore every five minutes, compressed air drills and 60 and 15-horse power engines. Plans are being made for a mill and to have the first unit of 20 tons in operation by September 15.

Gold ore has been encountered in the property of the Twin Peaks Mining company.

Hartley. The Chaco Copper company is making good progress in the erection of its mill. The plant warehouse has been completed and stocked, and the machine shop is also partially completed and partially in operation. Under the original plans the mill was to be in three units of 1,000 long tons each, but it has now been definitely decided to add two additional units immediately upon completion of the three units now under construction, bringing the capacity up to 6,000 tons. The final output may, however, be greater than 5,000 tons.

Rogallan. The new two-compartment working shaft of the property of the Mind Mine company is approaching a depth of 100 feet.

The mill at the Deadwood mine is

now in operation and active work will be started on the project.

E. B. Bentley of Oregon has a number of men at work on his various claims, but is present in doing little but development work. This property is, however, in such condition that he can immediately put a large force of men at work as soon as conditions in the Oregon camp warrant it.

Arizona. Negotiations are in progress to have the Superior & Boston share with the Arizona Commercial in the ownership of the smelting plant now owned by the latter, the two properties being connected by drifts at some of their levels. Both properties have recently made important discoveries. The former in southwest drift from the 1,000-foot level of the Metlax shaft encountered the Great Eastern vein 45 feet from the shaft, and passed obliquely across the latter showing a 20-foot width of the ore body at that point. The drift has been driven about 165 feet along the foot wall of the vein. The latter will not be crossed until the drift has been driven much farther. It may be possible that the Superior & Boston will have to ship some of the ore it has been obliged to hoist from

the drift, whose take is in solid ore. The ore is mainly chalcopyrite, containing some malachite, and very heavy in iron. The crosscut being driven to the drift on the same level to cut the Old Dominion fault is in shattered quartzite and iron.

The Pioneer Smelting company is sinking a well on a proposed site for its smelter at Hart's ranch in the Santa Cruz valley. The location is near Sahuarita station, on the main west coast line of the Southern Pacific, and is most conveniently situated to receive ore from the Twin Buttes, Between and Olive districts beside from the Plumed Knight and Goliad mines, belonging to the company. From all of these the wagon or rail road would be down grade. Sahuarita is 18 miles south of Tucson and has been equipped with a large station building, a 65,000-gallon water tank and railroad yards 7,000 by 300 feet.

A peculiar gold strike is reported from the Oro Blanco district. A ledge or deposit of amosite exposed for a length of several hundred feet, 50 to 100 feet wide, is said to show gold in the form of small flakes at many different places. A bar of four tons from the surface was recently put through the mill, when it is claimed, a recovery of \$4.75 per ton was effected. Added interest is given to this discovery in view of Prof. R. T. Hill's recently published theory in regard to the influence and significance of amosite in gold veins and deposits.

Work has started on the Minnesota-Copper mine under direction of Superintendent McDonnell. A new cage-like hoist has been installed and other preparations made for sinking a new shaft, in addition to draining the old workings. This mine has produced great quantities of excellent silver and gold ore and large bodies of mafic ore still exist in the upper levels. The old shaft, now down out, will be reclaimed and sunk several hundred feet deeper.

Preparations are now under way for the resumption of work on the Cyclope, under new management. This property is equipped with a Huntington mill and has produced hundreds of tons of high grade gold ore. The new management is considering plans for treating the several thousand tons of tailings on the property.

**WOULD CONVERT
ALL THE AMERICANS**

Buddhist Priest Here to Stimulate Interest in the Religion of the Island Empire Is a Deep Scholar.

Los Angeles. Cal., July 24.—Los Angeles Japanese are greatly interested in the visit to Southern California of Rev. G. Satoh, special deputy of the Lord Abbott of the Hongwanji sect of the Buddhist church of Japan.

This priest of Buddha is attached to the private staff of the leader of the religion in the empire and was detailed to visit the large Japanese settlements on the Pacific coast for the purpose of arousing interest in and stimulating the native religion in the subject of the mikado.

Rev. Satoh is said to be one of the most famous priests in the entourage of the Lord Abbott, the great central leader and interpreter of Buddhist philosophy and said to be the twenty-second direct descendant of the founder of the Hongwanji sect.

The visitor is deeply versed in both Oriental and Occidental philosophy, and is not attempting to conduct a proselytizing campaign among Americans. He is rather an advocate of peace between all souls, and declares that he feels the fact that the Japanese have not yet done anything of commanding importance for the world, but believes that they are about to enter upon a series of such activity producing men of the type of Newton, Watt and other great minds of the western world.

The Indianapolis restaurant advertises "guaranteed hash." We suppose this is the brand which doesn't need a shave after coming into the patron's possession.

"By and by, the automobile road race will be perfectly safe and tame," says and Eastern automobile paper. And then where will the fun come in for the spectators?

HELP WANTED.

WANTED—Competent bench man Chicago Mill and Lumber Co., corner Third and Marquette.

WANTED—Young man or lady short work. Salary \$25 month. Address R. J. P. Herald.

WANTED—Men and boys in Los Angeles. Small pay but can learn trade of automobiles, electricity, plumbing, bricklaying or actual concrete jobs. 200 students last year. Catalogue free. United Trade School. Contractor Co., Los Angeles, Cal.

WANTED.

WANTED—Good family horse and bridle carry for summer, best care. Phone 411.

WANTED—To rent about Sept. 1, three or four-room modern house, unfurnished. R. M. Henderson, Evening Herald.
